## A modern, stylish and efficient linear drain

The JESANI® Shower Channel is a modern, stylish and efficient linear drain that creates a sleek flawless finish to any shower or wet area. The channel has been designed for ease of installation, capturing the importance of fully containing free water overflow whilst also establishing a more cohesive finish to your shower room.

The vision of JESANI® was to create a linear drainage system that would provide design professionals and builders with the confidence to specify a product of this nature. This begins with the installation process which is extremely simple for the trades involved. The architecturally designed channel, manufactured from grade 304 stainless steel, enables the flanged trough to be fixed against the constructed walls/floors of the wet area with the waterproofing applied over the flanged appendage. This system creates a superior infrastructure for a wetroom and the channels are built to last, from your first design build and continuing on through your renovations thereafter.

The JESANI® products also enable you to consider adopting the Universal Design approach for your wetroom. This approach is to develop accessible living areas for people of all abilities throughout various life cycles.

An example of a Universal Design for your wetroom is a level entry shower access. With only a one-way fall required to the channel drain, there are no more step over nib walls to trip over, or a hollowed out area for the centre drain. Overall, this creates a safer, more userfriendly space for people of all ages and capabilities.

There are endless opportunities and solutions with the JESANI® Shower Channel for whatever your circumstances may be and our products can be custom made to meet your requirements. Contact JESANI® today for all your wetroom design solutions.
