

Casts by Edition Office x Bankston is a collection of architectural hardware which represents judicious edit of geometry and form, posing an exploration of how these elements fit into a hand. Although seeking reduction, the collection simultaneously has a clear and particular identity, with each piece sharing a linked language and typology.

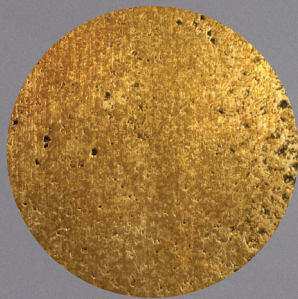

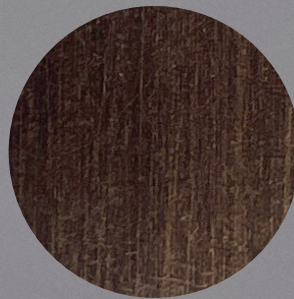

Showcasing an unconventional use of bronze and aluminum and a unique sand-casting fabrication process, the range celebrates the inherent qualities of materiality. The casting, and subsequent tumbling of individual components to smooth and soften, allow a remnant of the process to remain in the finished product. The pieces tell of a journey from solid to liquid and back again, speaking to the fundamentals of a core identity, and the nature of permutation itself.

Finishes

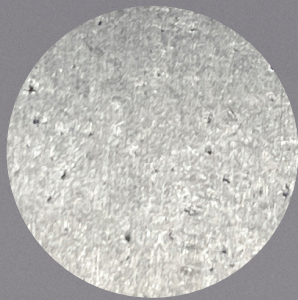

Each casting is manufactured in small batches meaning slight variations will occur from piece to piece. Production marks may include slight pour ripples or surface pitting. It will arrive with a bright finish but will oxidise and darken over time to reveal a distinctive patina.
