HISTORY

We produce a range of patented and proven rainwater systems for distribution throughout New Zealand.

eeezz® (pronounced 'easy' or 'ease') Rainwater Systems was born out of owning a business in building development, roofing, continuous gutter and downpipes.

With an eye for designs, shape and detail we identified the "dropper", "drop" or "pop" as commonly known in the plumbing and guttering world was one product that really had not changed in form over the last century or so.

Fitting a dropper was always a messy job with drilling holes, cleaning away drilling debris, fiddling around fitting the right coloured pot rivets, siliconing over the tops of the protruding

pot rivets – not a good look top and bottom. A frustrating job that always seemed to take too long, especially at the end of a hot day.

eeezz® Rainwater Systems designed the new eeezz® drop with tradesmen and DIY people in mind. We have successfully eliminated the annoyance factor with the eeezz® drop.

TOO **eeezz**® NO WORRIES!

eeezz®

DROP

eeezz® drop puts conventional droppers to shame.

You'll save time and money while showing customers that you use the best products on the market.

**Designed by experts
to fit better, look
smarter and last the
distance.**

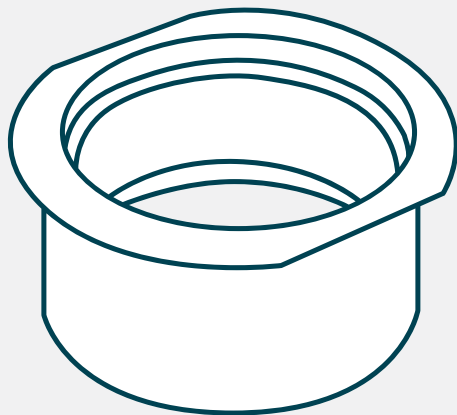

The unit is made from moulded, high grade, UV protected plastic that is specifically formulated to withstand Australasian weather conditions.

In conjunction with a small amount of silicone sealant, a moulded thread seal ensures the unit is a pressured watertight seal for life.

In a nutshell, this is why eeezz® drop is better,

- Only 20secs to install
- Pressure tight seal
- No rivets
- No drilling
- No debris
- No rust
- No corrosion
- Fits all standard pvc,
metal guttering and
downpipes
- Easy installation for DIY

**LESS SILICONE
LESS TOOLS
LESS TIME
LESS COST!**

eeezz® Drop

It comes in six sized to fit all standard gutter and downpipe sizes in Australasia.

PREMIUM DOWNPIPE BRACKET

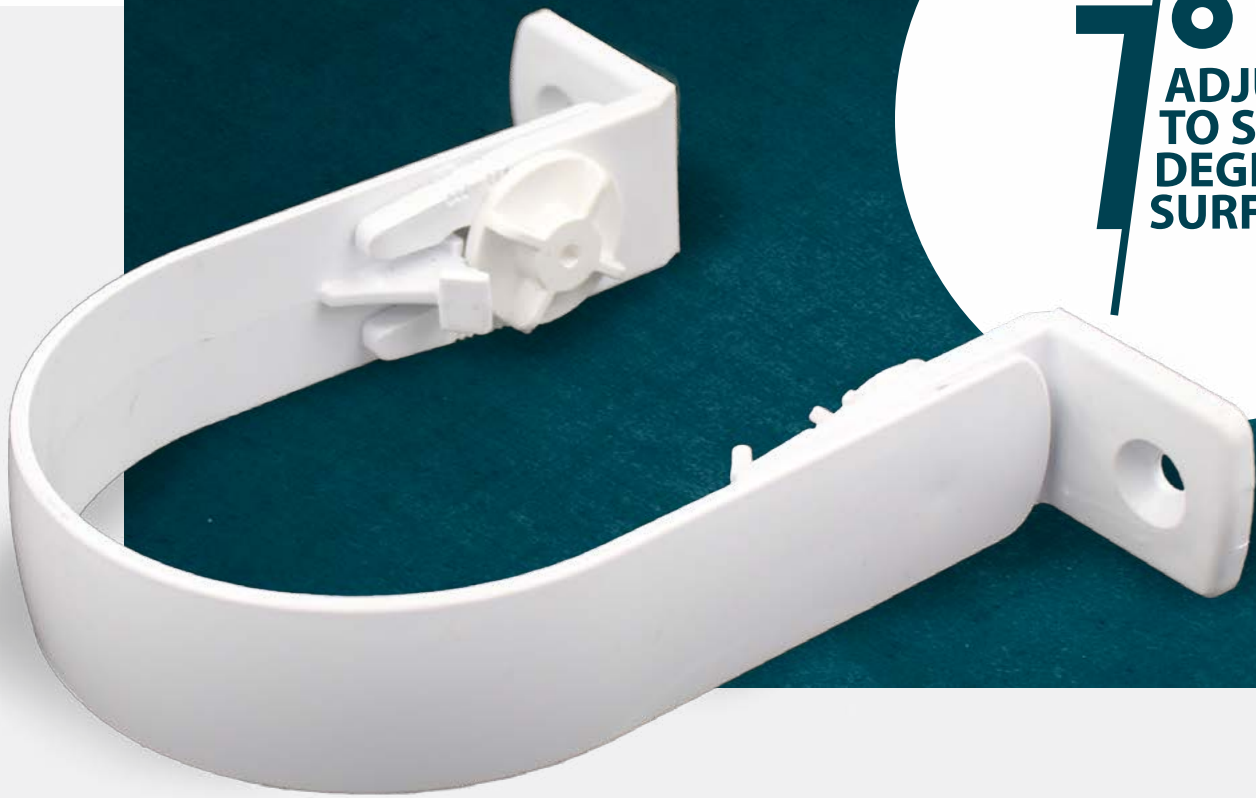

Premium profile looks modern and sleek.

Adjustable install angle to account for 0-7 degree weatherboard profiles for a square, tight finish without splitting, warping and cracking over time.

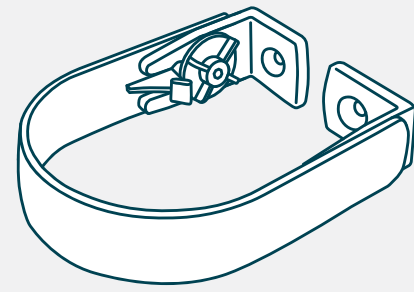

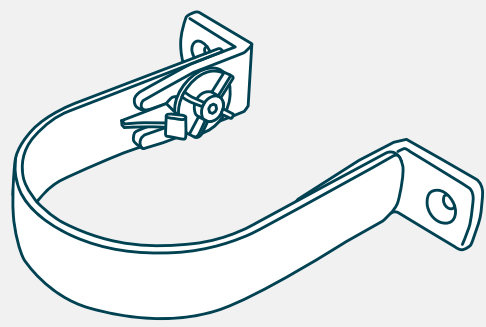

**Can be installed
the traditional
way by
snapping over
the existing
down pipe for
fast and easy
installation.**

Or, for a more streamlined installation the flanges can be reversed and attached behind the down pipe and then the bracket connected for a stealth, sleek finish.
