

Fantom Defender

Details

The Fantom Defender combines modern aesthetics with reliable security and smooth functionality to provide you with two functional modes.

Utilizing rare-Earth technology and a patented sliding face-mount system, the simple foot-activated Fantom Defender allows the door to be opened just enough to see who is on the other side before allowing complete access—protecting you against intruders attempting to enter your home by force.

When not being used as a security measure, the Fantom Defender is a functional, hazard-free doorstop used to prevent the door from contacting walls and furniture, or from opening any further than desired. The Defender also features a strong “hold open” function to keep you door held in position when desired.
