# 10 REASONS TO USE FLOORCOVER

## FLOORCOVER PROTECT THE NEW WAY TO PROTECT FLOORS!

*In both renovations and new construction, Floorcover offers a unique way of protecting floors, ready to use on a roll and easy to install without tape. The result is a clean breathable surface that protects the valuable floor beneath without being slippery. Above all it is easy and quick to install on all most types of floorings, both hard and soft.*

### 1. SAVES TIME

The simplest reason to choose Floorcover is how quickly it is installed. Just roll out the material with the pre-glued backing, cut and you are ready.

### 2. STAYS IN PLACE

Floorcover doesn't slide around but stays in place as long as you need it. When you temporarily cover a floor, Floorcover can just be laid over rugs and floors that will give a quick and simple installation.

### 3. REDUCED RISK OF SCRATCHES

On hardwood floors a piece of grit can do a lot of damage. With Floorcover, the glue on the back will hold the grit in one place. This makes it stay in position and reduces the potential damage considerably.

### 4. TEAR RESISTANT

Floorcover is made in a ductile material that almost eliminates the risk of tearing.

### 5. NO TAPE

Since the back is pre-glued with a tackifier adhesive you don't need any tape. Floorcover is as good on hard floors as on carpets and rugs. Install it with 10 cm overlap.

### 6. SLIP RESISTANT

Floorcover has a surface layer that is slip resistant. Since the back is glued and the face is slip resistant you get a safe work place.

### 7. SIMPLE TO USE ON STAIRS

Floorcover is simple and quick to install in stairs as no tape is required and it bonds to both tread and riser.

### 8. DOESN'T ROLL BACK ON YOU

When you roll our Floorcover it stays in place directly. The normal problem with material on a roll rolling itself up again does not exist. If you don't position the material correctly first time just lift it and re-position.

### 9. ON ALL FLOOR MATERIALS

Floorcover protects/attaches to parquet, wall to wall carpets, tiles, laminate, PVC, stone etc. In other words, you only need one covering material to protect all floor types.

### 10. PROTECTING AGAINST LIQUID

The surface on Floorcover has a liquid protecting layer but it will let moisture through from below. Floorcover protects your floor, whilst still letting it breathe.
