

OUR IMPACT

iver

Architectural door hardware with a design sensibility at its heart. Iver successfully combines style, function and quality, allowing you to impart personal meaning to the touch points in your home.

Every decision—from design to production—reflects our commitment to creating products that enhance your surroundings while positively impacting the world.

We use sustainable materials, like recovered brass, and package our products in compostable materials so that you can feel good about the choices you make for your home. We believe good design shouldn't come at the cost of the planet.

Sustainability Initiatives

Recycling Programs

Iver has implemented extensive recycling programs across materials such as brass, steel, cardboard, plastics, organics, and electronics. These efforts contribute to a circular economy by ensuring valuable materials are reused and recycled rather than disposed of in landfills.

Renewable Energy

As of 2025, new solar panels on our Adelaide premises generate more than a third of the site's electricity needs - cutting around 17 tonnes of CO₂ emissions each year and marking an important step in reducing reliance on traditional energy sources.

Electric Fleet Transition

Iver is transitioning to a zero or low emissions vehicle fleet by the end of 2027, aligning our operations with broader environmental sustainability goals.

Responsible Packaging

Iver is re-designing its packaging to eliminate single-use plastics and non-recyclable materials and replacing with compostable alternatives, in line with our Australian Packaging Covenant Organisation (APCO) commitments.

Compostable Mailers

In April 2025, we made the switch from petroplastic mailers to fully compostable mailers, helping to eliminate an estimated 13,000 plastic bags from landfill every year.

To ensure they break down properly, please remove all labels before disposal. Once labels are removed, the compostable mailers can be placed directly into your council's organic waste (green) bin, where they will naturally decompose alongside food scraps and garden waste.

Compostable Pallet Wrap

In February 2025, we also eliminated plastic pallet wrap in our operations, replacing it with a fully compostable alternative, reducing waste by approximately 64,000 metres of plastic per year. Compostable pallet wrap can also be disposed of in the council organic waste (green) bin.

This change is part of our ongoing commitment to reducing single-use plastics and making our packaging more sustainable, as we continue our journey towards impact certification.

APCO Certification

Since 2019, we have been a signatory to the Australian Packaging Covenant Organisation (APCO), achieving the highest performance rating of 'beyond best practice' in APCO's 2025 annual report. APCO set a target to make all packaging in Australia reusable, recyclable, or compostable by 2030.

Sustainable Materials

At Iver, we take a meticulous approach to selecting materials, considering their elemental properties, manufacturing capabilities, texture, colour, hand-feel, and durability. The majority of our products are made from solid forged brass, a second-use material, which is infinitely recyclable and does not degrade over time, further reducing our environmental impact.
