SIGNORINO

Laguna EV2065

Revered and adored universally for its style, durability and adaptability to any architectural intention, terrazzo is a composite material consisting of chips of natural stone set in cement, making it an entirely natural and sustainable product. Our terrazzo tile is the most technologically advanced. It is manufactured using a superior vacuum-pressed technology rendering it stronger and less porous than other traditionally pressed terrazzo.

Signorino's terrazzo tile range is available in three finishes: Polished, Honed & Sandblasted (textured & grip) for external use.
