

Nyssa IV Infrared Sauna

Specs & Features

HEATERS
12

POWER
3820 WATTS

PLUGS
2 X CIRCUITS
3 X 10 AMP PLUGS

CAPACITY
4 PEOPLE

HEAT DENSITY
942W/M3

WEIGHT
301KG

Take Control Wherever You Are

Wherever you are, you can turn on your sauna, set the temperature, duration, colour therapy and what you want to listen to, all from the palm of your hand.

High Heat Density

The higher the density, the greater the overall sensation of heat you will feel on your body. Technically, it is a measure of how many watts are needed to heat a cubic meter of space. CF-3 Carbon Fibre far-Infra red heaters give the Nyssa saunas some of the highest heat density readings of any Found—Space sauna.

Ultra Low EMF/ELF Heaters

The CF-3 is the third generation of Found—Space built carbon fibre heaters emitting the lowest levels of EMF (electromagnetic fields) and ELF (extremely low frequency of electromagnetic radiation) of any Found—Space sauna heater.
