

REAL METAL LAMINATES

Our **real metal laminate range** is an easy way for design professionals to use metal in their interior design projects. The 'metal working' processes are carried out in the factory and supplied in standard laminate sheet sizes - 2400 x 600mm, 3000 x 600mm, 2400 x 1200mm and 3000 x 1200mm.

Ranging in thickness from 0.6-1mm our metals can be cut with an overhead router, table saw or CNC machine.

Metals can be applied to a substrate with a clear contact adhesive but still have the texture of 'real metal' without the weight and expense of extra trades and installation practices.

Most importantly the finishes are real metal ranging from anodised aluminium (made to look like brass, copper and bronze), printed bespoke aluminium, through to real brass, copper and bronze.

We have one of the world's largest collections of metal designs and laminates available to us and as such do not issue price lists.

Metals range from \$450.00 - \$950.00 per sheet depending upon base metal, sheet size, bespoke/custom finish and quantities.

Options of off-the-shelf, lower budget solutions through to bespoke creations!

Easy to clean and no harsh chemicals required.

Fire Rated and Certified

*Excludes metal backings
