GlassSeal 421 Series

GlassSeal Series

The GlassSeal suits modern architecture prominent in many offices, education and commercial spaces.

Designed to maximise visual transparency while maintaining acoustic separation ideal for dynamic and collaborative environments. Available in two models

100 Series Designed with elegant simplicity while offering numerous practical benefits, the GlassSeal 100 is a wonderful solution to effectively partition a space while maximising light and openness.

400 Series Combining elegant transparency with reliable acoustic performance, the GlassSeal 400 is a perfect system for various spaces. Designed with the ability to combine with other finishes and configurations while maximising

Sliders

The 400 Slide Series is a moveable wall solution to maximise your space with moderate acoustic integrity. Designed for versatility and flexibility, the GlassSlide 400 Series can be used to combine with the SpaceSeal and GlassSeal 400 Series, allowing you to create a dynamic and practical space.

Suitable for a wide range of applications

Whilst the education sector was the inspiration of this product, its application in commercial construction is limitless where smaller opening sizes, mid-range acoustic performance and simplicity are required.

Surface Sliders

Our sliders have various options that accommodate many spatial and interior requirements, the maximum width for Single panels is 1200mm which can be combine to make bigger panels.

Variflex 100U

Dorma Variflex 100U

Variflex from DORMA is a premium, internationally-acclaimed German-designed product that can accommodate the most demanding room configurations.

Constructed with removable suspended panel faces allowing easy access for recovering, replacement or access for service and maintenance.

Variflex offers as standard, manually operated retractable top and bottom seals, ensuring ease of operation and guaranteed acoustic sealing.

Automated horizontal seals available (Electric Drive Operation).

Dorma Moveo

Semi or Fully Automatic Operable Walls

Office, hotels, exhibitions and studios increasingly require flexible and efficient space utilisation. There is a demand for intelligent solutions that enable a multi-functional and yet open-plan spatial configuration. For this the Moveo and Moveo Glass ranges combines transparent and sound insulating concepts.

For efficient Space utilisation

Conference rooms and offices are today able to benefit from flexible spatial management. It all becomes possible with MOVEO movable, sound-insulating partitioning systems with opaque elements and the MOVEO Glass version comprising transparent elements. With these systems, it is possible to modify room sizes with ease, flexibility and speed, and thus adapt them to different occupant group sizes. Floor plans thus become multifunctional and more spatially efficient.
