ACCUMEN SHAPES LTD adding VALUE to buildings

ACCUMEN
SHAPES

March 2015

accumen.co.nz

The three main methods used to manufacture Accumen® decorative mouldings:

1 DecraShape®

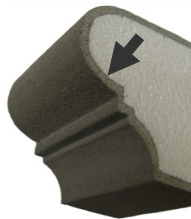

decorative kiln dried S grade EPS shape coated in KickIt® plaster with fibreglass reinforcing

- ◆ our usual standard method for decorative details on buildings
- ◆ Lightweight, robust, secure, exceptional

2 fourPLUS®

decorative kiln dried S grade EPS shape with a minimum of four mm thick KickIt® plaster coating with layers of fibreglass reinforcing

- ◆ at least four mm thick
- ◆ has a considerably higher MPa (resistance to compression)
- ◆ excellent for areas requiring a safeguard from impact
- ◆ suitable for historic buildings especially where weight on the wall can be an issue

3 ShapeCrete®

decorative lightweight concrete shape with mesh and, on larger shapes, reinforced rods

- ◆ can be made up to 2.700m lengths (depending on size and shape)
- ◆ a solid lightweight concrete product that can be used on historic buildings and areas requiring safeguard from impact

NB. fourPLUS® is also very suitable for historic buildings - especially where weight on the wall can be an issue

Architects, designers and competent tradespersons must follow professional trade specifications for the application of a weather tight membrane on the building BEFORE fixing Accumen® decorative details. We strongly recommend that only informed competent installers fix the decorative details. Decorative details may be water repellent in themselves, but due to the diverse situations they may be used in, Accumen Shapes Ltd's warranty is therefore limited to the quality of the goods supplied.
